made in italy

The machine S-R100 is part of the family of Rosselli sliding protective device saw benches. The machine S-R100 is designed for all who demands solidity, longevity and safety at a quite cheap price. This machine is formed by a working bed having the following dimensions 860 x 360 mm (it is called "semi-retractable table" by the company Rosselli) assembled on bearings resistant to high pressures and to the continuous movements which, in turn, rest on a further working bed. The steel disk in use has a Ø 550 mm and, respecting the EEC regulations currently in force, is protected by a cover plate. Even all the moving parts are provided with the same protection. The saw bench S-R100 is powered by a drive shaft and is characterized

by a side three-points connection (the tractor will be at the right of the operator), which ensures the maximal stability of the machine during the cutting operations. Use this saw bench is extremely easy: it will be sufficient to place the trunk on the working bed, lock it by the jaw, i.e. the lock system, push the carriage and you're done. In this way the Rosselli company wants to show its customers how easy is chopping wood with his machines.

SAW STOP DEVICE

This is composed of an emergency lever that the operator can use in dangerous situations: the blade will come to rest within 10 seconds although the drive-shaft will continue to turn.

Optional

Device for Sharpening Wood

Optional

Wheels

Optional

Widia Blade
