# Technical features

Double pump to speed up the working process for an improved power output

Height and length adjustment of the drawbar

Ball hook with release handle

Brass pads for more effective and long-lasting sliding

Winch for overturning the wood splitter during the transport phase

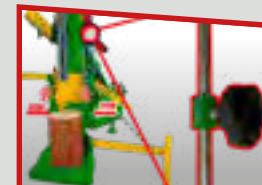

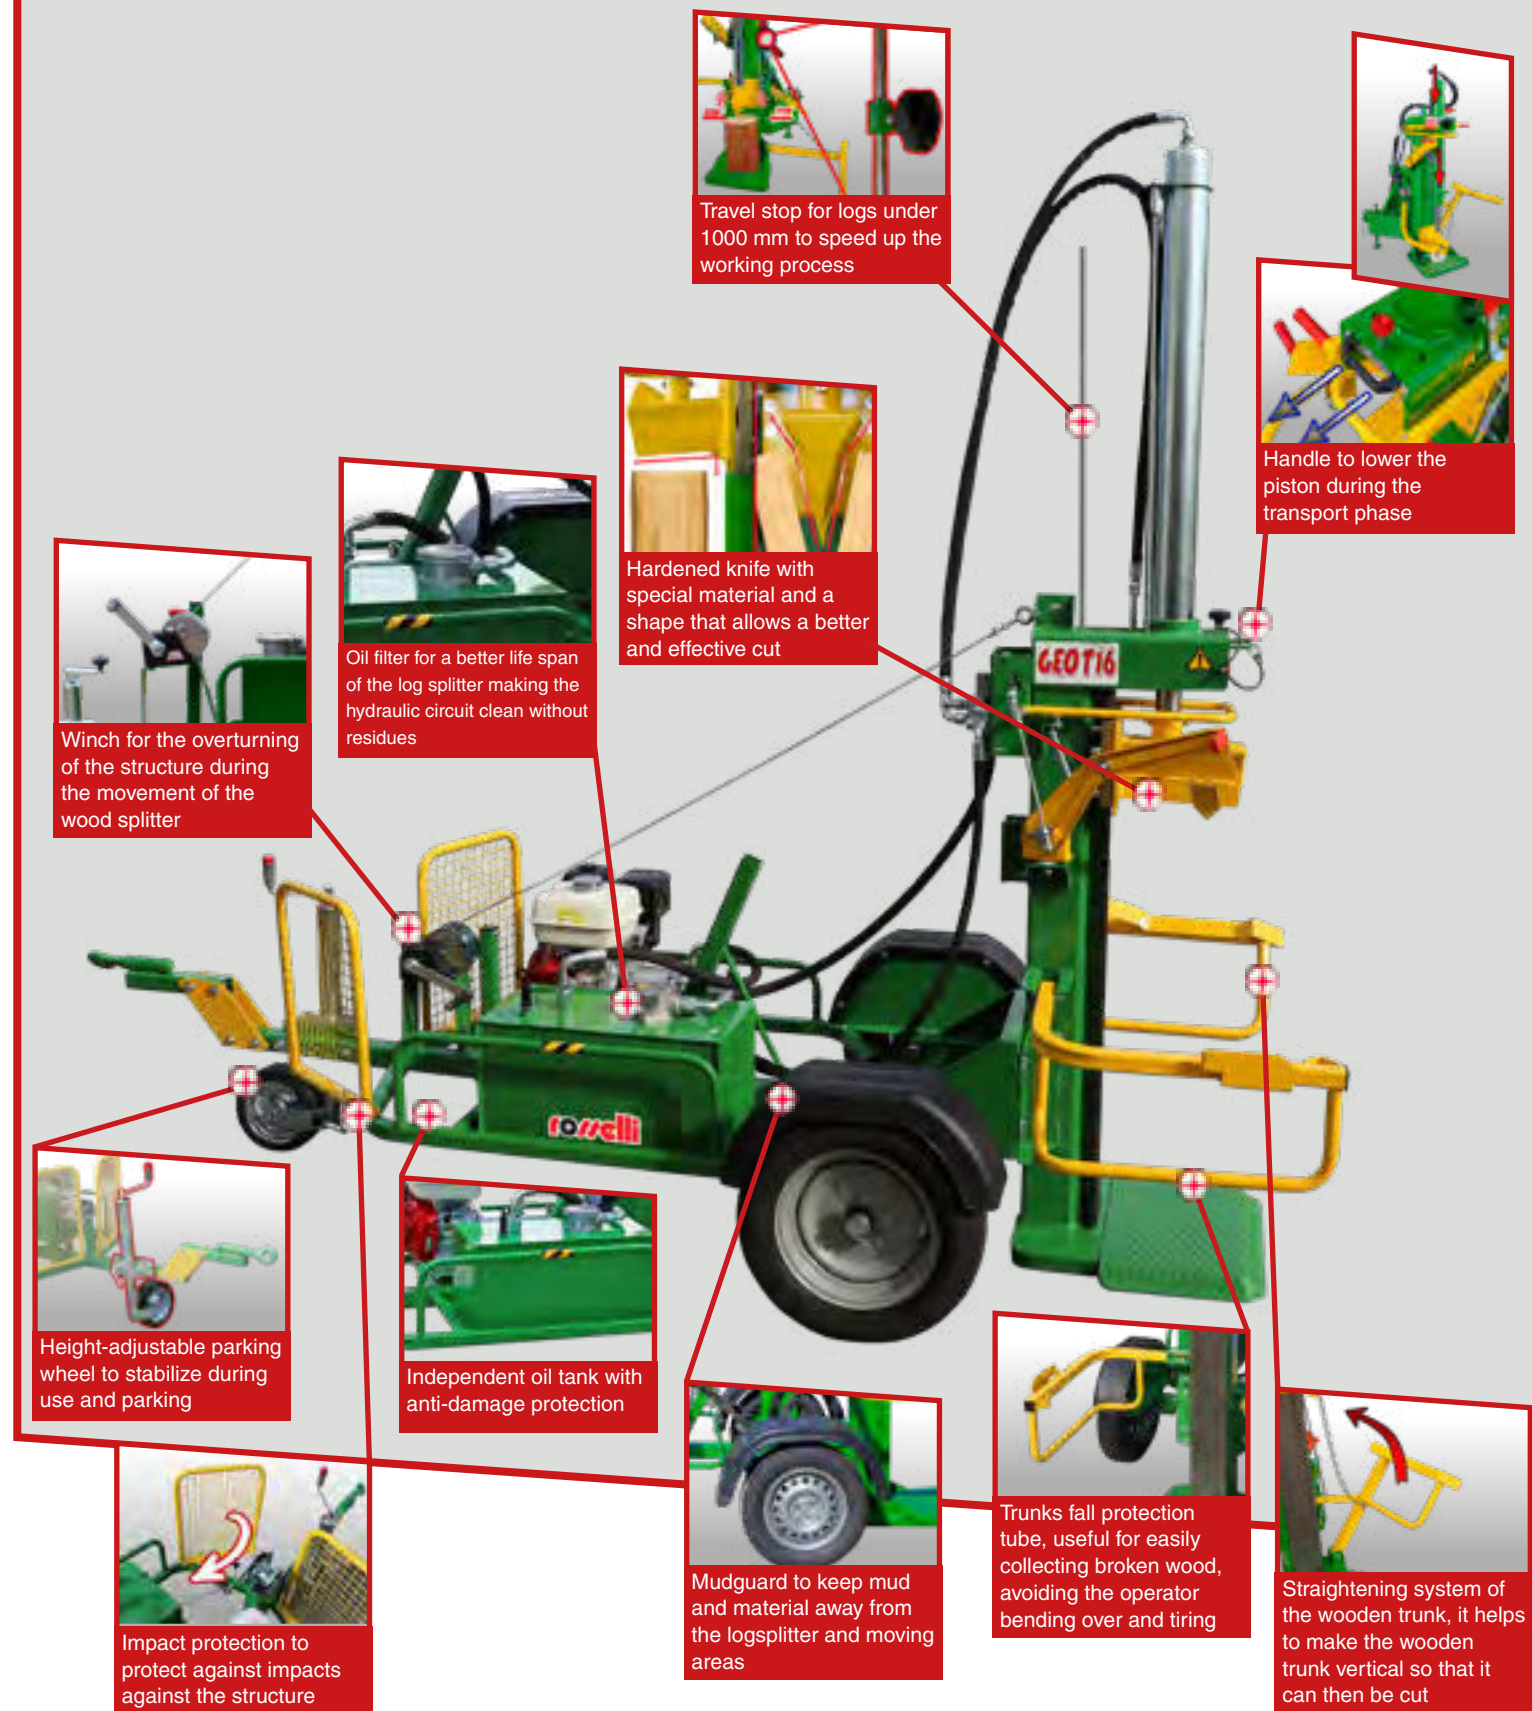

## PROFESSIONAL LOG SPLITTER EASY TO MOVE IDEAL FOR RENTALS AND DISCOMFORT AREAS

Delta Msc is the professional wood splitter available in 12 and 16 TON versions of power capable of breaking logs of wood up to 1 meter in length. One of the main advantages is that you can move it to the workplace or directly into the woods, remaining independent of electricity and boring cables thanks to the internal combustion engine.

Being designed for transport, the Delta Msc can be placed in a horizontal position with the piston retracted. This causes the structure to have a more aerodynamic and less bulky shape during the journey. In addition, to prevent brushwood or sticks that are along the road from damaging the splitter, a protective grille has been set up in the front.

WOODSPLITTER

Travel stop for logs under 1000 mm to speed up the working process

Handle to lower the piston during the transport phase

Hardened knife with special material and a shape that allows a better and effective cut

Oil filter for a better life span of the log splitter making the hydraulic circuit clean without residues

Winch for the overturning of the structure during the movement of the wood splitter

Height-adjustable parking wheel to stabilize during use and parking

Independent oil tank with anti-damage protection

Impact protection to protect against impacts against the structure

Mudguard to keep mud and material away from the log splitter and moving areas

Trunks fall protection tube, useful for easily collecting broken wood, avoiding the operator bending over and tiring

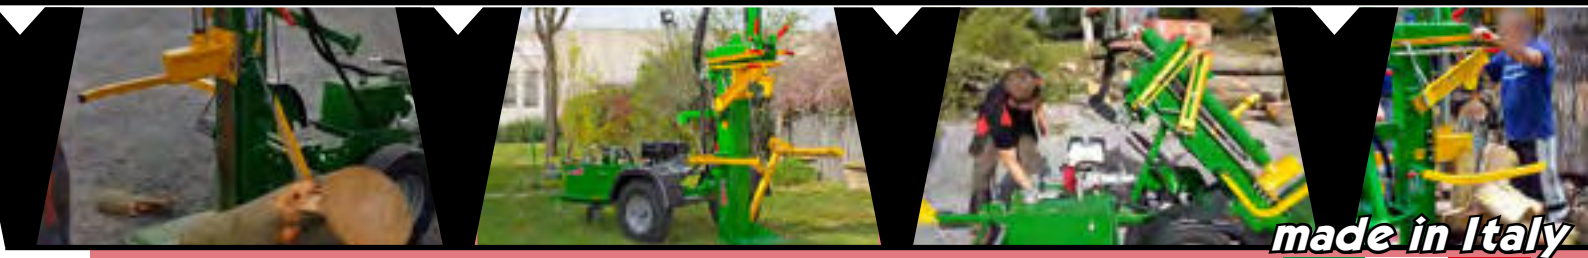

Straightening system of the wooden trunk, it helps to make the wooden trunk vertical so that it can then be cut

WOODSPLITTER

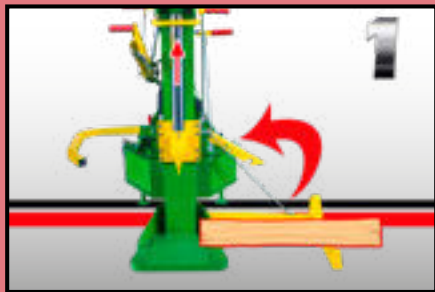

The descriptions are intended to be provided as a simple indicative title. The Company reserves the right to make any changes for the purpose of improvement or for any construction or commercial requirement.

**made in Italy**

**STANDARD WITH  
THE LOGSPLITTER:**

**New loader of wood logs with “Stop System”**

**DELTA 12 MSC-S      DELTA 16 MSC-S**

VERSION **PREPARED** FOR ROAD HOMOLOGATION

The Rosselli company does not homologate the woodsplitter for the street but makes it homologable

**Braking system activated on the drawbar**

**Braking and parking lights**
