Saw Bench

rosselli

made in Italy

S-R150

The saw bench S-R150 with sliding protection is a very simple working machine able to satisfy many different needs. One of the most important peculiarity of this saw bench is its tractor joint placed in the back that let free both the circular sides to operate. The cover blade carter has been developed in order to guarantee a perfect cut wood leftovers discharge.

The Rosselli firm has also studied a newly designed wood-block: an ergonomic and functional solution expressly developed to avoid both possible contacts with the disk and the dangerous rotations of

the wood during the cutting phases. Three trapezoidal belts characterized by high performance and durability permit the movement transmission from the driveshaft to the shaft. This machine is completely built in Italy respecting European standards and it gives priority to security. In particular, this model is very appreciated by Rosselli customers for its operating simplicity. Infact, one of the aim of this saw bench is to make the work a pleasant moment thanks to its simplicity: men, women and also old people would be able to operate without any problem.
